

FX Series / FX-1UC

Incorporating Adande® Technology

FX Series is changing the way we store and access food products, precisely.

Maintain better temperatures in a small under-counter footprint.

The FX-1UC holds temperature at +/- 2°F (compare that to standard refrigeration designs that often fluctuate 6 to 10°F).

The FX-1UC is 100% front breathing and on concealed casters for easy mobility.

The FX-1UC can replace any standard 27" unit.

The FX-1UC can operate at any temperature setting between -5°F and +40°F.

The FX-1UC holds cold with the food, not pouring it out onto the floor when you access the compartment.

FX Series / FX-1UC

Incorporating Adande® Technology

When filling a traditional under-counter unit to its max, having access to your product is difficult. So is holding a consistent temperature. **Only with FX is it made easy.**

Better manage access to your stored product.

One FX drawer holds (14) 5 lb. bags of fries. That's 3 cubic feet of storage!

No more emptying the contents to get to your product; easy to access high capacity storage.

A traditional drawer only holds (5) 5 lb. bags. Only 1.4 cubic feet of storage.

The FX insulated insert is the most useable cubic storage capacity on the market – 100% of the compartment can be used vs. 35-60% on standard cabinets.
