

From cold storage
to the patient
room and still
cold, never frozen.

"Finally we found the perfect solution. We were so impressed with the FX cooler's ability to keep product cold that we purchased it immediately. We were looking for a really good milk cooler, but we discovered many other advantages of the FX as well."

James Fritz, RD, LD, Director of Food & Nutrition Services, Baptist Hospital

HEALTHCARE FOODSERVICE beverage temp solution.

From cold storage to the patient room and still cold, never frozen. Never has a piece of refrigeration been so universal and versatile in a kitchen. Standard "milk cooler" designs do not hold proper temperatures, causing milk to crystallize, deeming it undrinkable by patients and health inspectors. The 27" undercounter FX unit is the long awaited solution for hospital tray make-up operations, keeping cold beverages, like milk, under proper temperatures.
