

Avtec is the original innovator of the Energy Distribution System. Since the early 1970's, when we received the Innovations award from Foodservice Consultants Society International, Avtec has been providing this flexible and project simplifying technology to the industry.

Energy Distribution Systems offer the ability to allow for one-point service connections for multiple utilities, thereby lowering connection costs, and simplifying installations. These systems are uniquely designed to allow for future additions and changes of equipment and are generally provided with electrical cord sets and quick-disconnect hoses for ease of cleaning and service. Only Avtec offers many different styles and designs to fit the project need.

Open "H" design allows for view through the kitchen as well as easily cleanable floor space

Point of use circuit breaker/outlet plates are easily interchangeable with other breaker locations and can easily be added for future electrical changes

Attractive stainless steel housing, mounted on pedestals, with connections below, eliminates panel boxes, unsightly connections and valves, pipes and conduit

One-point connection for electric, gas, water, steam, air, etc, eliminates critical field rough-in dimensions and minimizes chance for error

Entire system can be removed and relocated easily during renovations or remodels

One single responsibility for all utilities and fire-fuel shutoff, and can incorporate hood controls and lighting in one neat package

Styles:

- Heavy Duty "E" Series (shown above, left)
- Medium Duty "M" Series
- End Mounted "R" Series (shown above, right)
- Economy "Loco" Series

Options:

- Ground Fault Equipment Protection
- Cord and plug sets and flexible NSF/AGA plumbing connectors
- Faucets, pot fillers, spray hoses, hose reels; EDS mounted
- Integral ventilator controls and interconnects
- Steam controls and cantilevered kettle supports

Applications:

- Wall mounted
- Overhead
- Back-splash mounted
- Cart mounted, "power train" uses
- Down from above, up from below or floor to ceiling

Overhead Model MOD for service to work tables with drop extension cords

Many other uses for light duty designs:

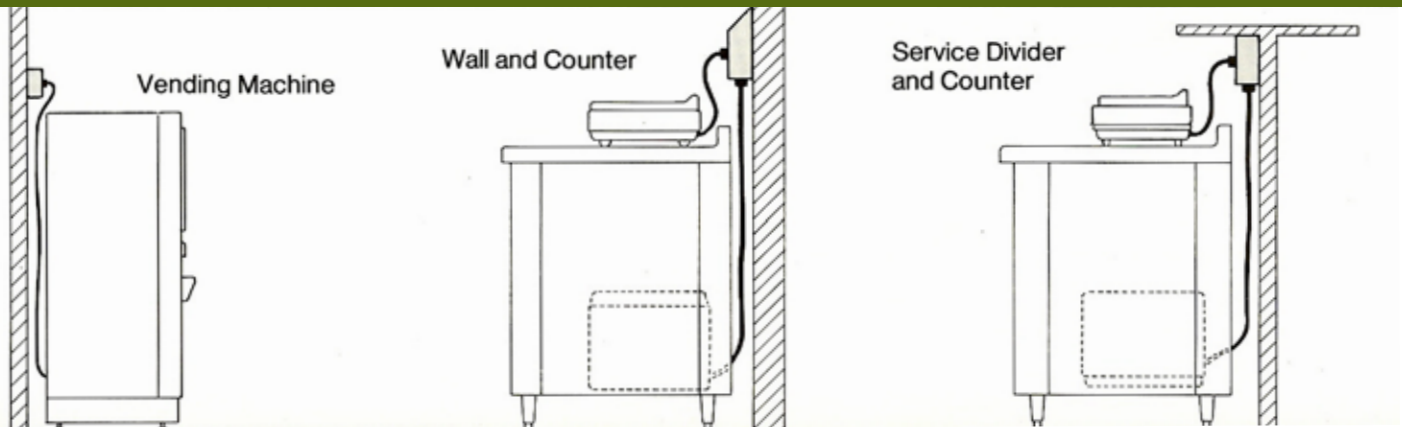

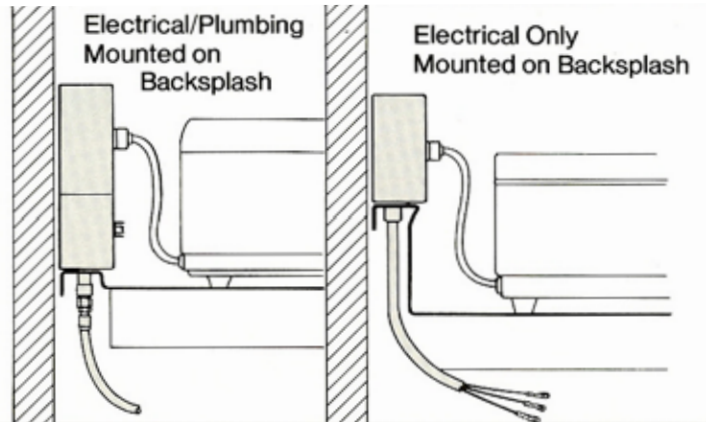

APPLICATIONS

Counter Type

Power and Plumbing Chain can be mounted on counters in a variety of ways, and are only 3" wide x 6" high. Connections can be made front face or battery, allowing for items under the counter to be easily connected.

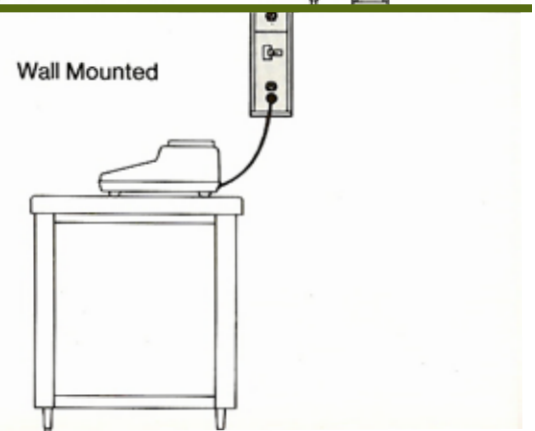

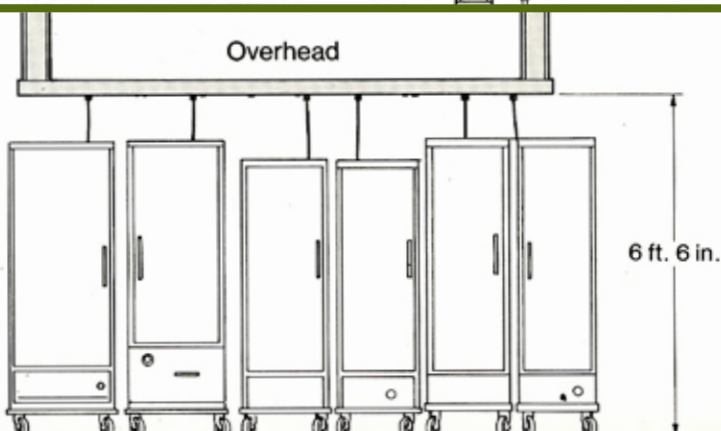

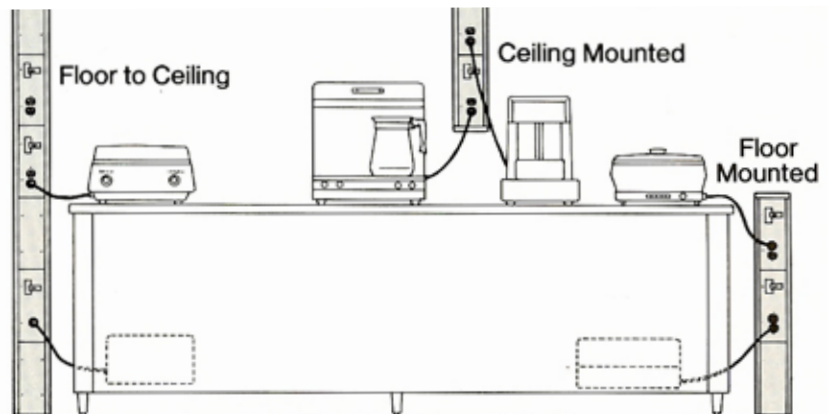

Wall Mounted

The most popular of all systems. Power and Plumbing Chain can be used in almost any location; your creativity is the only limitation. They are 6" high, and 3", 4½" or 6" deep.

APPLICATIONS

Prep areas, tables, counters and cart storage areas can be serviced with utilities as shown. The ceiling and floor column units are 6" x 6" and are available in any height. Overhead systems are generally mounted 6'-6" above the floor for ease of inserting plugs.
