This document provides information for:

BRAISING PAN DRAIN OPTIONS

DRAIN CART & DRAIN TROUGH ASSEMBLY

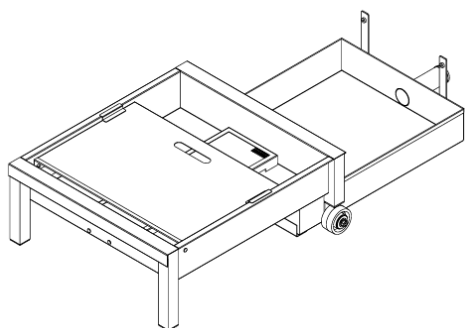

DRAIN PAN SHELF / DRAIN DRAWER

DRAIN CUP & HOSE ASSEMBLY

DRAIN CART & DRAIN TROUGH ASSEMBLY

BPM-15G/E	BPM-30G/E	BPM-40G/E
PN 174057	PN 150498	PN 150498

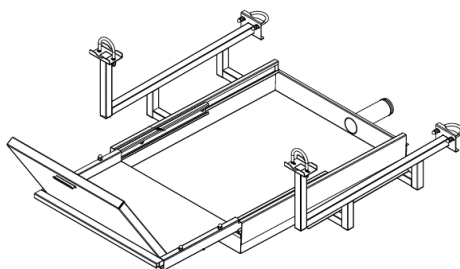

If there is not a floor trough located in front of the braising pan, The Drain Cart and Trough Assembly gives the customer the flexibility to drain waste or cleaning water into a nearby floor drain. This option features a drain pan that will bolt to the rear frame of the braising pan. A customer provided hose is connected to the tube at the rear of the drain pan and plumbed to a nearby floor drain. The Drain Cart with slider feet and splash shield moves forward and back, into a position to allow the customer to pour the contents of the braising into it. This option is compatible with a 2" Tangent Draw Off. The 2" Tangent Draw Off is positioned to allow draining of pan's contents into the drain cart.

DRAIN PAN SHELF / DRAIN DRAWER

BPM-15G/E	BPM-30G/E	BPM-40G/E
NA	PN 158386	PN 158476

If there is not a floor trough located in front of the Braising Pan, the Drain Pan Shelf with Drawer option provides the customer with the same flexibility to drain into a nearby floor drain as the Drain Cart and Trough Assembly. This option will bolt to the rear and front of the braising pan. It also features a hose connection at the rear so the customer can plumb to a nearby floor drain. Unlike the Drain Cart assembly, this assembly does not contact the floor underneath the Braising Pan. This option is compatible with the 2" Tangent Draw Off. However, due to the size of this pan and its position under the Braising Pan, the 2" Tangent Draw Off will not drain into this drain drawer.

DRAIN CUP & HOSE ASSEMBLY

BPM-15G/E	BPM-30G/E	BPM-40G/E
PN 159102	PN 159102	PN 159102

The Drain Cup and Hose Assembly offers the customer the flexibility to drain product or waste out of their optional 2" Tangent Draw Off Valve. When a customer purchases this option, they are provided with a drain cup that will hang on the 2" Tangent Draw Off, as well as an 8' food grade hose, elbow, and hose clamps. The hose will be sized and cut to fit the customer's specific application in the field.
